TERROIR MAP · GUIDE

Linking to a place

Two settings in the web address open Terroir Map on a chosen country or coffee region, and can focus the map on it. Use them to share a link to an origin, or to embed a map of one place on another website.

`place`

Which country or region the map opens on. The map zooms to it and loads its altitude, slope, weather and soil data.

`isolate`

1 or **0**. With a recognised place, **1** focuses the map on that place and hides everything outside it.

1 · How to write the link

Start with the map's address, add `?`, then the first setting. Join a second setting with `&`. The order of the settings doesn't matter.

```
https://brygmanden.github.io/terroirmap/?place=Kenya&isolate=1
```

- **Spaces:** write them as `+` or `%20`, for example `place=Costa+Rica`. Most browsers also accept a typed space and convert it.
- **Accents** can be left out: `Reunion` finds Réunion, `cote+d'ivoire` finds Côte d'Ivoire.
- **Capital letters, spaces and punctuation are ignored,** so `ET-05`, `et05` and `Et 05` all work.

2 · `place`: where the map opens

YOU CAN USE	EXAMPLES	WHAT HAPPENS
Country name	`Ethiopia` `Costa+Rica`	The map frames all of the country's coffee regions. A country has no single data point, so the data panel loads the coffee region nearest the middle of them.
Country code (2-letter ISO)	`ET` `CR` `BR`	
Region name	`Yirgacheffe` `Huila`	The map zooms to the region's outline, shows its name label and loads its data.
Region's other name	`Cerrado` `Kona`	
Region ID	`ET-05` `CO-11`	
Region and country, separated by a comma	`Eastern+Province,+Rwanda`	For a region name used in more than one country. Without the country, the first match in the list is used.

The full lists of country codes and region IDs are at the back of this guide.

> **Not recognised?** If the value doesn't match any country or region, it's ignored and the map opens on its normal start view (Yirgacheffe). The browser's developer console shows a warning saying the place wasn't recognised, which helps when testing a link.

3 · `isolate` : focus on the place

VALUE	EFFECT
`1` or `true`	Focuses the map on the place (details below).
`0` or `false`	Shows everything, the same as leaving `isolate` out.

What `isolate=1` does

- **Region drop-down:** lists only the place's regions. That's all of a country's regions, or just the one region.
- **Map markers:** region dots, farms, mills and auctions outside the place are hidden.
- **Dimming:** the map outside the place is darkened, so the place stands out.
- **Exploring:** panning and zooming still work, and people can still tap anywhere for its data.

> **Only works with a recognised place.** Without a valid `place`, `isolate` is ignored and the whole map shows as normal.

Good to know

- **Country edges** come from Natural Earth borders (public domain). Réunion isn't a separate country in that data, so its coffee region outline is used instead.
- **Farms just outside the edge are kept.** Borders and region outlines are simplified, so anything within 3 km of the edge still shows.
- **Few or no farms?** Some places have few entries in the farm data. Kenya has two, and Réunion has none. That's the data, not the link.

4 · Example links

`https://brygmanden.github.io/terroirmap/?place=Ethiopia`

Opens on Ethiopia, framing all its coffee regions. Loads the data for Jimma, the region nearest the middle.

`https://brygmanden.github.io/terroirmap/?place=ET`

The same, using the country code.

`https://brygmanden.github.io/terroirmap/?place=Yirgacheffe`

Zooms to the Yirgacheffe / Gedeo outline and loads its data.

`https://brygmanden.github.io/terroirmap/?place=ET-05`

Opens on Harar, using its region ID.

`https://brygmanden.github.io/terroirmap/?place=Cerrado`

Opens on Cerrado Mineiro (Brazil), matched by its other name.

`https://brygmanden.github.io/terroirmap/?place=Eastern+Province,+Rwanda`

Picks the Rwandan region when a name exists in two countries.

`https://brygmanden.github.io/terroirmap/?place=Kenya&isolate=1`

Kenya only: drop-down lists Kenyan regions, everything else is hidden and dimmed.

`https://brygmanden.github.io/terroirmap/?place=Huye&isolate=1`

A single region in focus: one region in the drop-down, the map dimmed outside its outline.

`https://brygmanden.github.io/terroirmap/?place=Brazil&isolate=0`

Opens on Brazil with everything else still shown (same as leaving isolate out).

Embedding the map on another website

Put a link with the settings inside an `iframe`. This one shows only Colombia:

```
<!-- Terroir Map, focused on Colombia -->
<iframe
  src="https://brygmanden.github.io/terroirmap/?place=Colombia&isolate=1"
  width="100%" height="720" style="border:0" loading="lazy">
</iframe>
```

5 · Countries and codes

The 60 coffee-growing countries on the map, with their 2-letter codes and the number of coffee regions in each.

COUNTRY	CODE	REGIONS
Angola	AO	3
Australia	AU	2
